Sensors Partners with TESTA

Sensors, Inc. has entered into a distributorship agreement with TESTA Analytische Messsysteme, GmbH. TESTA, located in Munich, Germany, is one of the leading suppliers of Flame Ionization Detectors (FIDs), known worldwide in the automotive and chemical industries, as well as in industrial production. Sensors will distribute TESTA gas analyzers within the Americas, China, Japan, the Phillipines and India, and will incorporate TESTA FIDs in future SEMTECH products. The TESTA product range includes standard analyzers, FIDs for special applications, and heated filters and other accessories for HC measurement. Sensors' web page will be updated soon to include the TESTA product line.

Automotive X Prize Completes Shakedown Testing at MIS

The teams and organizers of the Automotive X Prize \$10 Million competition wrapped up the Shakedown Phase of this event in the second week of May. All in all, the teams had some very positive feedback for the organizers, saying that it was tough, but fair. Sensors was pleased to assist the teams by collecting emissions data for them. The emissions portion of the event was optional during this shakedown phase of the competition, but will become mandatory for all internal combustion engines in the next phase of the event, which takes place at MIS in June.

American HyPower

Sensors enjoyed working with the teams, some of whom were entering new territory, collecting the first set of emissions data on their custom built vehicles. Installing the emissions analyzer was straight forward, as Sensors came prepared for the event with two highly specialized trailers, which housed our SEMTECH EFM-HS, our high speed flow meter, and the SEMTECH-DS, our gaseous emissions analyzer.

Busy Year for In-Use Compliance Testing Services

Sensors' Testing Services Department has had a very busy year, supplying in-use compliance testing services for four original equipment manufacturers (OEMs) and four regulatory agencies in the US and Canada, in addition to supporting several international competitive events. Sensors' engineers and technicians handle the entire testing process, from custom installations to data processing and compliance report submissions. Sensors' SEMTECH-DS emissions analyzer has proven its ruggedness time and again, from underground mines to mile high atmospheres, from the cold winters of Alaska to the suppressing heat of Death Valley. Our testing services department continues to expand. Contact us to see how we can help you!

Sensors Kicks off Emissions Testing Blog

Sensors has kicked off a blog to share what we have learned over the last decade of emissions testing: The Do's, The Don'ts and the helpful tips to keep your in-use emissions testing on track. We have now posted our second installation of the blog: The Boy Scout Motto of In-Use Emissions Testing.
