Just before last Christmas MAHLE Aftermarket received a well deserved gift: the Approval Certificate from PTB for our Particle Counter PMU 400, compliant to PTB-A German national standard.

This prestigious result concludes a 3-year preparation and development process, in which the whole team did its best, in order to expand and complete our EmissionPRO line, providing as usual an outstanding solution valid also for the demanding markets, such as the German one.

For this reason I'd like to say to all a big BRAVO!
A special thanks to [Henrike](#) and [barbara](#), for supporting me daily, with so much patience.

Poco prima dello scorso Natale MAHLE Aftermarket ha ricevuto regalo meritissimo: il certificato di omologazione da parte del PTB per il nostro contatore di particelle PMU 400, conforme allo standard nazionale tedesco PTB-A.

Questo prestigioso risultato conclude un processo di preparazione e sviluppo durato 3 anni, in cui tutto il team ha dato il massimo, per ampliare e completare la nostra linea EmissionPRO, fornendo come sempre una soluzione eccezionale anche per i mercati esigenti, come quello tedesco.

Per questo vorrei dire a tutti quanti un grande BRAVO!
Un ringraziamento speciale va a [Henrike](#) e [barbara](#), per avermi sostenuto quotidianamente, con tanta pazienza.

The German national test authority has officially approved our Emission PRO® PMU 400 particle counter.

From July 2023, the use of PTB-approved particle counters is a prerequisite for performing emission tests on Euro 6 diesel vehicles.

The device is equipped with our revolutionary CPC technology, and despite tight supply chains, it is available immediately and in sufficient quantities.
